Height: **12"-18"**

Recommended Spacing: **12"**

Bloom Time: **April, May**

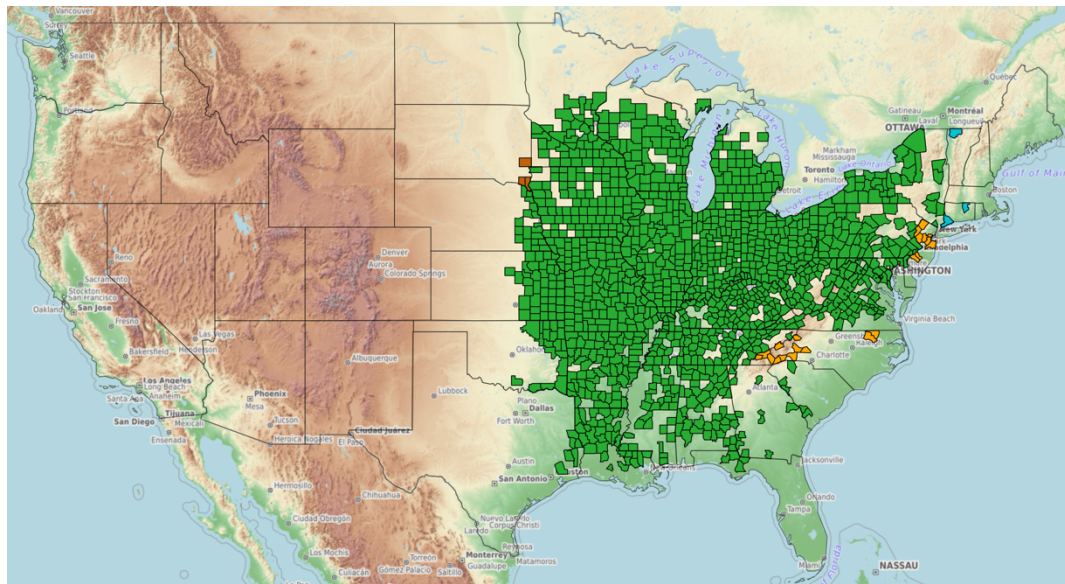

Bloom Color: **violet, blue**

Hardiness Zone: **4, 5, 6, 7, 8**

Additional Tags: **attracts hummingbirds, fragrant flowers, pollinator favorite, shade garden plant**

Select for outstanding flower color, 'Blue Moon' welcomes spring with an abundance of fragrant, violet-blue flowers that will attract hummingbirds and butterflies

'Blue Moon' is an ideal flowering ground cover for shade. It will tolerate more sun in cooler areas, or where the soil remains consistently moist during summer. Very easy to grow in a variety of soils, it will slowly colonize via a fibrous rhizomatous root system. It is not an aggressive species, and it combines well with other shade garden favorites. The blooming period occurs mid- to late spring and can extend for over a month.
