Materials for Floral Crown

1. tube of Oasis cold glue
2. At least 2 wires of 18 gauge and at least 20 wires of 22 gauge or thinner
3. Bark wire to make the crown
4. Fresh flowers that will hold up out of water. You can usually get a good mix from a Farmer's Market. Look for roses, carnations, alstroemeria, scabiosa, ranunculus, berries, small succulents, foliage, etc. You must prep these flowers by cutting them to about 3 inches and letting them sit in water with flower food overnight. This will help weed out the flowers that may not hold up. I do not recommend hydrangea or anemones.
5. Reindeer moss or sheet moss, etc. to fill in holes.
6. At least 1 full roll of stem tape for wiring and taping. Aim for Floratape brand, as the stuff at craft stores is really gummy.
7. Hot glue gun can be helpful
8. Bindwire can be helpful but not necessary
9. A roll of spool wire can be helpful
10. Thin ribbon to adjust your crown. Aim for 1/4 inch to 3/8 inch
11. Scissors to cut ribbon
